CONSOLIDATED WEB ACTIVITY REPORT

HTML and CSS Mini Projects

Introduction

This report presents a collection of web development activities created using HTML and CSS. The projects demonstrate how webpages can be structured, styled, and organized to present information in a clear and attractive way. Screenshots of the source repository and the finished webpages are included as evidence of the completed activities.

Objectives

• Understand the basic structure of an HTML webpage.

• Use CSS to apply colours, spacing, alignment, typography, and card layouts.

• Organize website content with headings, navigation links, sections, and footers.

• Create simple, user-friendly webpages for different topics.

• Upload and maintain activity files in a GitHub repository.

Tools and Technologies

HTML: Used to create the structure and content of each webpage. **CSS:** Used to style the pages, including colours, layouts, spacing, and image presentation. **Web browser:** Used to open and test the webpages. **GitHub:** Used to store and organize the activity files in a repository.

Activities Included

1. GitHub Repository: The repository contains the HTML and CSS files for the web activities. It provides an organized place to store and update the project files.

2. Foodie Restaurant Website: This webpage presents a restaurant menu with food images, item names, prices, order buttons, special offers, customer reviews, opening hours, and contact details. The warm colour scheme and card layout help make the menu easy to browse.

3. Yoga and Meditation Website: This webpage introduces yoga and meditation, displays images, shows class categories, and provides a class schedule and contact information. The green colour scheme supports a calm and peaceful theme.

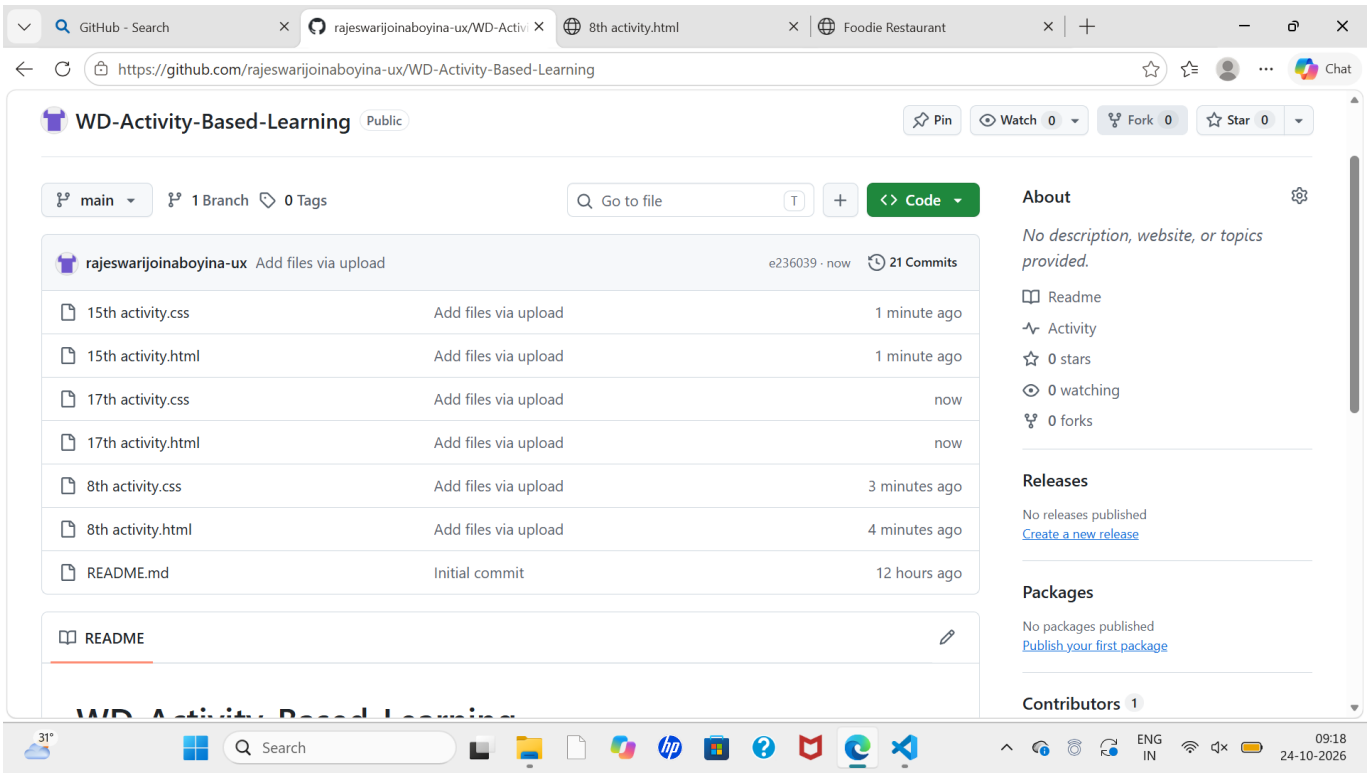

4. Explore India Tourism Website: This webpage highlights destinations such as the Taj Mahal, Hampi, and Kerala. It also introduces Indian festivals, local cuisine, and useful travel tips.

Conclusion

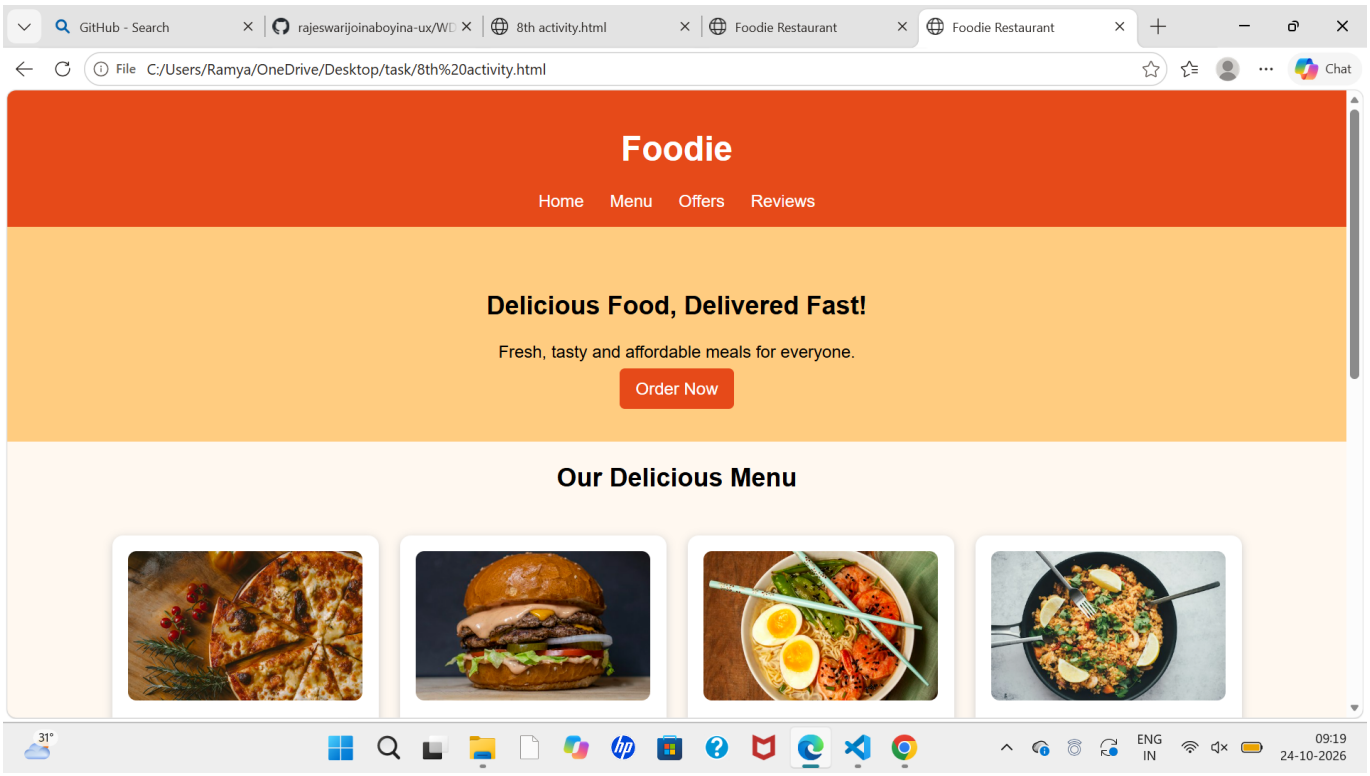

These activities provide practical experience in designing webpages with HTML and CSS. They demonstrate the use of page sections, navigation, images, cards, and consistent styling for different subjects. The work helped develop basic web design skills and an understanding of how website files can

be organized and maintained using GitHub.
